

# Wall & Void Treatment

We hit'em where they hide, *inside your walls.*

Bugs live inside your walls and in hidden areas. They lay eggs, they reproduce and develop infestations, all within the walls of your home. Our Wall & Void Treatment hit's pests where they hide - *inside your walls!* Indoors, we remove wall switch plates and plumbing access covers, and apply a naturally based insecticide dust that kills most pests and prevents their breeding for up to 12 months. Outdoors, we apply the dust through weep holes and cracks, and apply a perimeter barrier to complete the protection. We then return every 90 days and reapply the outdoor barrier to keep them away. It's the original "Safer Solution<sup>®</sup>" brand treatment and it's *Guaranteed for up to 1 full year!*

## Wall & Void Treatment Program Features

- ✓ Naturally based dust applied into walls & voids
